DETAILED ACTION

1. This communication is in response to applicant's 03/06/2001 in the application of Coggeshall for a "Contacting a computing device outside a local network".

Election/Restriction

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-35 drawn to a Combined circuit switching and packet switching: This subclass is indented under subclass 351. Subject matter wherein the switching network has both (a) a switch which establishes a path between a source and destination with the path being held for the duration of the communication, and (b) a switch which routes information based on an address associated with the information data in a channel which is only occupied for a duration of the time required to transmit the information data and the associated address, classified in class 370, subclass 352.
 - II. Claims 36-48 drawn to the Switching a message which includes an address header: This subclass is indented under subclass 351. Subject matter wherein

Art Unit: 2665

information data to be switched is organized with one or more bytes preceded by an identification information indicative of a source or destination station. (1)

Note. The switching of the message having an address header is commonly called packet switching. Processing of address header for routing, per se: Subject matter having details of techniques or apparatus which process the address information field for switching the packet of information, classified in class 370, subclass 389.

III Claims 49-73 drawn to the Computer-to-computer data addressing: This subclass is indented under subclass 200. Subject matter further comprising means or steps for transferring address data associated with user data between the computers to ensure that associated user data are transferred to or from the intended computers, classified in class 709, subclass 245.

3. The inventions are distinct, each from the other because of the following reasons:
Inventions I, II and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a switch which routes information based on an address associated with the information data in a channel which does not include the particular listed of the invention II, such as

Art Unit: 2665

Switching a message which includes an address header. Invention III has separate utility such as transferring address data associated with user data between the computers to ensure that associated user data are transferred to or from the intended computers which does not include the particular listed of the invention I and II. See MPEP § 806.05(d).

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for Group I is not required for Group II or III, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37.CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
